

# Chip Inductors (Chip Coils)

**EU RoHS Compliant**

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
- For more details, please refer to our web page, "Murata's Approach for EU RoHS" (<http://www.murata.com/en-eu/support/compliance/rohs>).

Because of the difference of measurement condition, electrical characteristics plots on this catalog may have some difference to official specification value.

# Contents

Product specifications are as of November 2016.

Product Guide .....	p2
---------------------	----

## Inductors for Power Lines

Part Numbering .....	p8
Product Detail .....	p10
⚠Caution/Notice .....	p151
Soldering and Mounting .....	p153
Packaging .....	p158

## Inductors for General Circuits

Part Numbering .....	p164
Product Detail .....	p165
⚠Caution/Notice .....	p190
Soldering and Mounting .....	p192
Packaging .....	p196

## RF Inductors

Part Numbering .....	p200
Product Detail .....	p201
⚠Caution/Notice .....	p292
Soldering and Mounting .....	p294
Packaging .....	p298

## TOKO Products Inductors for Power Lines

Product Detail .....	p302
⚠Caution/Notice .....	p415
Soldering and Mounting .....	p416
Packaging .....	p419

## TOKO Products Inductors for General Circuits

Product Detail .....	p422
⚠Caution/Notice .....	p427
Soldering and Mounting .....	p428
Packaging .....	p430

Please check the MURATA website (<http://www.murata.com/>) if you cannot find a part number in this catalog.

# Product Guide

	Series	Structure	Size Code in inch (in mm)	Inductance Range (H)										Rated Current (A)							
				0.1n	1n	10n	100n	1μ	10μ	100μ	1m	10m	10m	100m	1	10	100				
Inductors for Power Lines	LQM18FN_00	p141	0603 (1608)					1μH		10μH						50mA	150mA				
	LQM18PN_BO	p52	0603 (1608)					1.5μH									600mA				
	LQM18PN_CO	p53	0603 (1608)					470nH		2.2μH							700mA	850mA			
	LQM18PN_DO	p55	0603 (1608)					2.5μH									700mA				
	LQM18PN_DH	p56	0603 (1608)					2.2μH									650mA				
	LQM18PN_FO	p58	0603 (1608)					1μH									600mA				
	LQM18PN_FH	p59	0603 (1608)					470nH		2.2μH							700mA	1.4A			
	LQM18PN_FR	p61	0603 (1608)					220nH		4.7μH							620mA	1.25A			
	LQM18PN_GH	p63	0603 (1608)					1μH		3.3μH							1.05A				
	LQM18PW_CH	p65	0603 (1608)					1μH		2.5μH							750mA	950mA			
	LQM21DN_00	p143	Multilayer Type	0805 (2012)					1μH		4.7μH					7mA	60mA				
	LQM21FN_00	p145		0805 (2012)					1μH		4.7μH					7mA	220mA				
	LQM21FN_70	p147		0805 (2012)					4.7μH		10μH						100mA	120mA			
	LQM21FN_80	p149		0805 (2012)					4.7μH		10μH						100mA	120mA			
	LQM21PN_CO	p67		0805 (2012)					470nH		2.2μH						600mA	1.1A			
	LQM21PN_CA	p69		0805 (2012)					2.2μH								1.05A				
	LQM21PN_CH	p71		0805 (2012)					470nH		2.2μH						1.05A	1.6A			
	LQM21PN_EH	p73		0805 (2012)					240nH		2.2μH						1.1A	2.8A			
	LQM21PN_GO	p75		0805 (2012)					470nH		3.3μH						800mA	1.3A			
	LQM21PN_GC	p77		0805 (2012)					1μH		2.2μH						800mA	900mA			
	LQM21PN_GH	p79		0805 (2012)					470nH		4.7μH						1A	2.4A			
	LQM21PN_GR	p81		0805 (2012)					1μH		4.7μH						800mA	1.3A			
	LQM21PN_GS	p83		0805 (2012)					2.2μH		4.7μH						750mA	950mA			
	LQM2MPN_DH	p102		0806 (2016)					2.2μH								1.27A				
	LQM2MPN_EH	p104		0806 (2016)					240nH		2.2μH						1.1A	4.1A			
	LQM2MPN_GO	p106		0806 (2016)					470nH		4.7μH						1.1A	1.6A			
	LQM2MPN_GH	p108		0806 (2016)					160nH		2.2μH						1.3A	5A			
	LQM2HPN_CH	p85		1008 (2520)					240nH		2.2μH						850mA	2.55A			
	LQM2HPN_EO	p87		1008 (2520)					560nH								1.5A				
	LQM2HPN_EH	p88		1008 (2520)					240nH		2.2μH						1.3A	4.5A			
	LQM2HPN_GO	p90		1008 (2520)					470nH		4.7μH						1.1A	1.8A			
	LQM2HPN_GC	p92		1008 (2520)					1μH		4.7μH						800mA	1.5A			
	LQM2HPN_GH	p94		1008 (2520)					240nH		2.2μH						1.5A	5A			
	LQM2HPN_GS	p96		1008 (2520)					2.2μH		4.7μH						1A	1.1A

Packaging .....	p158

## ● Part Numbering

### Inductors for Power Lines

#### ① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

#### ② Structure

Code	Structure
H	Wire Wound Type (Ferrite Core)
W	
M	Multilayer Type (Ferrite Core)

#### ③ Dimensions (LxW)

Code	Nominal Dimensions (LxW)	Size Code (in inch)
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
21	2.0x1.25mm	0805
2M	2.0x1.6mm	0806
2H	2.5x2.0mm	1008
3N	3.0x3.0mm	1212
31	3.2x1.6mm	1206
32	3.2x2.5mm	1210
43	4.5x3.2mm	1812
44	4.0x4.0mm	1515
5B	5.0x5.0mm	2020
55	5.7x5.0mm	2220
66	6.3x6.3mm	2525

#### ④ Applications and Characteristics

Code	Series	Applications and Characteristics
D	LQM	for Choke (Low-current DC Power Supplies)
F		for Choke (DC Power Supplies)
D	LQH	for Choke
S		for Choke (Magnetically Shielded Type)
C	LQH/LQW	for Choke (Coating Type)
P	LQM/LQH	for Power Line

#### ⑤ Category

Code	Category
N	Standard Type
B	Special Feature Classification
W	

#### ⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry ( $\mu\text{H}$ ). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If inductance is less than  $0.1\mu\text{H}$ , the inductance code is expressed by a combination of two figures and the capital letter "N," and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

#### ⑦ Inductance Tolerance

Code	Inductance Tolerance
D	$\pm 0.5\text{nH}$
J	$\pm 5\%$
K	$\pm 10\%$
M	$\pm 20\%$
N	$\pm 30\%$

#### ⑧ Features (Except for LQH□□P/LQM□□P)

Code	Features	Series
0	Standard Type	LQM/LQH*1 /LQW
1	Low DC Resistance	LQW
2	Standard Type	LQH32C/32D
3	Low DC Resistance	LQH32C/43CN
5	Low Profile Type	LQH2MC/32C/32D
7	Large Current Type	LQM21F
8	Low DC Resistance /Large Current Type	

\*1 Except for LQH32 Series

#### ⑨ Thickness

(LQH□□P/LQM□□P Only • Except for LQH43P/LQH5BPN\_38)

Code	Nominal Dimensions (T)
B	0.35mm
C	0.5mm
D	0.6mm
E	0.7mm
F	0.8mm
O	0.85mm
G	0.9mm
J	1.1mm
M	1.4mm
N	1.55mm
P	1.65mm
T	2.0mm

Continued on the following page. ↗

Continued from the preceding page. ↘

⑨ Electrode (Except for LQH□□P/LQM□□P)

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQM/LQW
2		LQH2MC
3	LF Solder	LQH (Except for LQH2MC)

⑨ Specification

(LQH□□P/LQM□□P Only • Except for LQH43P/LQH5BPN\_38)

Code	Specification
0/S	Standard Type
C	Good Bias Current Characteristics Type
H/A/E	High Spec Type (Low DC Resistance; Good Bias Current Characteristics Type)
R	Low DC Resistance Type

⑨ Thickness (LQH43P/LQH5BPN\_38 Only)

Code	Dimensions (T)
26	2.6mm
38	4.0mm max.

⑩ Packaging

Code	Packaging	Series
K	Embossed Taping (ø330mm Reel)	LQH*1 /LQM21*2
F		LQH3NP_MR
L	Embossed Taping (ø180mm Reel)	LQH*5/LQM18P/LQM21*2 /LQM31P/LQM32P/LQM2HP/LQM2MP
E		LQH3NP_MR
B	Bulk	LQH2MC/LQM/LQW
J	Paper Taping (ø330mm Reel)	LQM18/LQM21*3
D	Paper Taping (ø180mm Reel)	LQM18/LQM21*4 /LQW

\*1 Except for LQH2MC/LQH2HP\_G0/LQH3NP/LQH43C  
 \*2 LQM21D(22 - 47μH)/LQM21F(4.7 - 47μH)  
 \*3 LQM21D(1.0 - 10μH)/LQM21F(1.0 - 2.2μH)  
 \*4 LQM21D(1.0 - 10μH)/LQM21F(1.0 - 2.2μH)/LQM21P  
 \*5 Except for LQH3NP\_MR

Class of Magnetic Shield: Magnetic Resin

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

\*S.R.F.: Self-Resonant Frequency

\*1: When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°C (at the rated current under 85°C) or 20°C (at the rated current under 105°C).

\*2: When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. Keep the temperature (ambient temperature plus self-generation of heat) under 105°C. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 20°C.

Operating temp. range (Self-temp. rise included): -40 to 125°C

Operating temp. range (Self-temp. rise not included): -40 to 105°C

Class of Magnetic Shield: Magnetic Resin

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

\*S.R.F.: Self-Resonant Frequency

When rated current is applied to the products, inductance will be within ±30% of nominal inductance value. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°C max. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C.

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

\*S.R.F.: Self-Resonant Frequency

When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°C max (ambient temperature 85°C). Keep the temperature (ambient temperature plus self-generation of heat) under 125°C.

Operating temp. range: -40 to 85°C

Class of Magnetic Shield: Ferrite Core

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

\*S.R.F.: Self-Resonant Frequency

When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°C max. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C.

## Inductors for Power Lines ⚠️Caution/Notice

### ⚠️Caution

#### Rating

##### 1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

##### 2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise.  
Please contact us in advance if applying a surge current.

### Notice

#### Storage and Operating Condition

##### <Operating Environment>

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

##### <Storage Requirements>

##### 1. Storage Period

The LQM series should be used within 6 months; the other products should be used within 12 months.  
Check solderability if this period is exceeded.

##### 2. Storage Conditions

- (1) Store products in a warehouse in compliance with the following conditions:  
Temperature: -10 to +40°C.  
Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in a chemical atmosphere such as one containing sulfurous acid gas or alkaline gas. This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.

- (2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
- (3) Store products on pallets to protect from humidity, dust, etc.
- (4) Avoid heat shock, vibration, direct sunlight, etc.

#### Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

##### LQW\_C series

- To prevent breaking the wire, avoid touching with sharp materials, such as tweezers or other materials such as the bristles of a cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, a support pin pushes the components up from the bottom of the base tape. In this case, please remove the support pin. The support pin may damage the components and break the wire.
- In rare cases, the laser recognition cannot recognize this component. Please contact us when you use laser recognition. (There is no problem with the permeation and reflection type.)
- The product temperature rises about 40°C maximum when the permissible current is applied to LQW15C/LQW18C. Please use caution regarding the temperature of the substrate and air around the part.

##### LQH\_C/D/H/M/N/P series

- To prevent breaking the wire, avoid touching with sharp materials, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- Temperature may rise up to max. 40°C when applying the rated current to Inductors for Power Lines. Use caution regarding the temperature rating of the circuit board and components around the chip Inductors.

##### LQM series

- There is the possibility that magnetism may change the inductance value. Do not use a magnet or tweezers with magnetism when handling chip inductors. (The tip of the tweezers should be molded with resin or pottery.)
- When the excessive current over rated current is applied, it may cause the inductance value to change due to magnetism.

##### <Transportation>

Do not apply excessive vibration or mechanical shock to products.

Continued on the following page. ↗

## Inductors for Power Lines ⚠️Caution/Notice

Continued from the preceding page. ↘

### <Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values.

For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQW, LQH series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

### <Rated Current>

(LQH2HP\_GR/JR, LQH2MPN\_GR, LQH3NP\_GR/JR/ME, LQH44P\_GR, LQH5BPN\_38 Series)

When rated current is applied to the products, Inductance will be within ±30% of specified inductance value range.

(Other LQH\_P Series except for LQH2HP\_G0 Series)

When rated current is applied to the products, Inductance will be within ±30% of nominal inductance value.

### • Rated Current Based on Temperature Rise

For LQH2MC series and LQH\_P series, rated current is set to keep the temperature rise caused by self heating 40°C or less.

For other Inductors for Power Lines, please refer to individual specifications.

### <Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

Bending

Twisting

## Measuring Method

### Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixtures can be described by F-parameter as shown in the following:

2. The impedance of chip inductors (chip coils)  $Z_x$  and measured value  $Z_m$  can be described by input/output current/voltage.

$$Z_m = \frac{V_1}{I_1}, \quad Z_x = \frac{V_2}{I_2}$$

3. Thus, the relation between  $Z_x$  and  $Z_m$  is shown in the following:

$$Z_x = \alpha \frac{Z_m - \beta}{1 - Z_m \Gamma}$$

$$\text{where, } \alpha = D / A = 1$$

$$\beta = B / D = Z_{sm} - (1 - Y_{om} Z_{sm}) Z_{ss}$$

$$\Gamma = C / A = Y_{om}$$

(  $Z_{sm}$ : measured impedance of short chip  
 $Z_{ss}$ : residual impedance of short chip\*  
 $Y_{om}$ : measured admittance when opening the fixture )

### \*Residual inductance of short chip

Residual Inductance	Series
0.556nH	LQW15C
0.771nH	LQW18C

4.  $L_x$  and  $Q_x$  should be calculated with the following equation.

$$L_x = \frac{\text{Im}(Z_x)}{2\pi f}, \quad Q_x = \frac{\text{Im}(Z_x)}{\text{Re}(Z_x)}$$

$L_x$ : Inductance of chip Inductors (chip coils)  
 $Q_x$ : Q of chip Inductors (chip coils)  
 $f$ : Measuring frequency

# Inductors for Power Lines Soldering and Mounting

## 1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the

chip inductor's (chip coil's) electrode.

### 2. Standard Soldering Conditions

#### (1) Soldering method

Chip Inductors (Chip coils) can be flow or reflow soldered.

Please contact Murata regarding other soldering methods.

For LQH2MC/2MP/2HP/3NP/32D/32P/43PB/44P/5BP/55D/66S, LQM2MP\_DH/EH/GH/2HP\_CH/EH/GH/JH/18P\_CH/DH/FH/GH/21P\_CA/CH/EH/GH/32P, LQW15C/18C series, please use reflow soldering.

Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).

Do not use water-soluble flux.

The flux used for the LQW15C/18C series should be a rosin-based flux that includes a middle activator equivalent to 0.06wt% to 0.1wt% chlorine.

For additional mounting methods, please contact Murata.

Continued on the following page. ↗

Continued on the following page. ↗

## Inductors for Power Lines Soldering and Mounting

Continued from the preceding page. ↘

### (3) Reworking with a Soldering Iron

Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

- Soldering iron power output: 80W max.
- Temperature of soldering iron tip: 350°C
- Diameter of soldering iron end: 3.0mm max.
- Soldering time: within 3 s

Please keep the fix time with the soldering iron within 2 times.

## 3. Mounting Instructions

### (1) Land Pattern Dimensions

Large lands reduce the Q of the mounted chip. Also, large protruding land areas (bordered by lines having the dimensions "c" and "d" shown) cause floating and electrode leaching.

### (2) Land Pattern Designing (LQH series, LQW series)

Please follow the recommended patterns. Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in "position shift" in the soldering process.

### (3) Magnetic Coupling

Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling. LQM, LQH66S, and LQH\_P series have a magnetically shielded structure. The structure makes their coupling coefficient smaller than that of conventional chip inductors (chip coils).

### (4) PCB Warping

The PCB should be designed so that products are not subjected to mechanical stress caused by warping of the board.

Products should be located in a sideways direction (Length:  $a < b$ ) to mechanical stress.

Except LQH3NP/44P/5BP

The electrode part of the product should be located as in the figure to avoid mechanical stress.

LQH3NP/44P/5BP

Continued on the following page. ↗

## Inductors for Power Lines Soldering and Mounting

Continued from the preceding page. ↘

### (5) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that the correct amount is applied.

Guideline of solder paste thickness

- LQW15C: 50 to 100μm
- LQM, LQW18C, LQH2MC/2HP, LQH3NP/32P, LQH43PB/LQH44P/5BP: 100 to 150μm
- LQH31C/32C, LQH43C/43PN, LQH55D, LQH66S: 200 to 300μm

## 4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
  - Output: 20W/l max.
  - Duration: 5 minutes max.
  - Frequency: 28 to 40kHz
  - Care should be taken not to cause resonance of the PCB and mounted products.

### (3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

- (a) Alcohol cleaning agents
  - Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agents
  - Pine Alpha ST-100S
  - LQH66S series: Aqueous agents should not be used because they may cause quality deterioration or damage to appearance.

- (4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

Product Detail .....	p165
⚠Caution/Notice .....	p190
Soldering and Mounting .....	p192
Packaging .....	p196

## ● Part Numbering

### Inductors for General Use

(Part Number)

LQ	M	18	N	N	47N	M	0	0	D
①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩

#### ① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

#### ② Structure

Code	Structure
B	Multilayer Type (Ferrite Core)
H	Wire Wound Type (Ferrite Core)
M	Multilayer Type (Ferrite Core)
W	Wire Wound Type (Ferrite Core)

#### ② Dimensions (LxW)

Code	Nominal Dimensions (LxW)	Size Code (in inch)
04	0.8x0.4mm	03019
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
21	2.0x1.25mm	0805
31	3.2x1.6mm	1206
32	3.2x2.5mm	1210
43	4.5x3.2mm	1812
44	4.0x4.0mm	1515

#### ④ Applications and Characteristics

Code	Series	Applications and Characteristics
C	LQW	for Choke
N	LQB/LQM	for Resonant Circuit
N	LQH	for Resonant Circuit
M		for Resonant Circuit (Coating Type)

#### ⑤ Category

Code	Category	
A	General	Impedance Device (Near GHz Band)
N	General	Standard Type

#### ⑩ Packaging

Code	Packaging	Series
K	Embossed Taping (ø330mm Reel)	LQH/LQM21*1
L	Embossed Taping (ø180mm Reel)	LQH/LQM21*1
B	Bulk	LQB/LQM/LQW
J	Paper Taping (ø330mm Reel)	LQB/LQM18/LQM21*2
D	Paper Taping (ø180mm Reel)	LQB/LQM18/LQM21*2/LQW

\*1 LQM21N(2.7 - 4.7μH) only.

\*2 LQM21N(0.1 - 2.2μH) only.

#### ⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "N," and the unit of inductance is nano-henry (nH).

The capital letter "N" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits.

#### ⑦ Inductance Tolerance

Code	Inductance Tolerance
J	±5%
K	±10%
M	±20%
N	±30%

#### ⑧ Features

Code	Features	Series
0	Standard Type	LQM*1 /LQH*2/LQW
1	Standard Type	LQB/LQM21N
2	Standard Type	LQH32M

\*1 Except for LQM21N Series

\*2 Except for LQH32 Series

#### ⑨ Electrode

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQB/LQM/LQW
3	LF Solder	LQH

Operating temp. range: -55 to 125°C

Class of Magnetic Shield: Ferrite Core

For reflow soldering only

\*S.R.F.: Self-Resonant Frequency

When rated current is applied to the products, self-generation of heat will rise to 25°C or less.

## Inductors for General Circuits ⚠️Caution/Notice

### ⚠️Caution

#### Rating

##### 1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

##### 2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise.  
Please contact us in advance if applying a surge current.

### Notice

#### Storage and Operating Condition

##### <Operating Environment>

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

##### <Storage Requirements>

##### 1. Storage Period

The LQB series and LQM series should be used within 6 months; the other products should be used within 12 months.

Check solderability if this period is exceeded.

##### 2. Storage Conditions

- (1) Store products in a warehouse in compliance with the following conditions:  
Temperature: -10 to +40 degrees C.

Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in a chemical atmosphere such as one containing sulfurous acid gas or alkaline gas. This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.

- (2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.  
(3) Store products on pallets to protect from humidity, dust, etc.  
(4) Avoid heat shock, vibration, direct sunlight, etc.

#### Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

##### LQH\_M/N series

- To prevent breaking the wire, avoid touching with sharp materials, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.

##### LQW\_C series

- To prevent breaking the wire, avoid touching with sharp materials, such as tweezers or other materials such as the bristles of a cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, a support pin pushes the components up from the bottom of the base tape. In this case, please remove the support pin. The support pin may damage the components and break the wire.

- In rare cases, the laser recognition cannot recognize this component. Please contact us when you use laser recognition. (There is no problem with the permeation and reflection type.)
- The product temperature rises about 40°C maximum when the permissible current is applied to LQW15C. Please use caution regarding the temperature of the substrate and air around the part.

##### LQB series and LQM series

- There is the possibility that magnetism may change the inductance value. Do not use a magnet or tweezers with magnetism when handling chip inductors. (The tip of the tweezers should be molded with resin or pottery.)
- When excessive current over the rated current is applied, it may cause the inductance value to change due to magnetism.

##### <Transportation>

Do not apply excessive vibration or mechanical shock to product.

Continued on the following page. ↗

## Inductors for General Circuits ⚠️Caution/Notice

Continued from the preceding page. ↘

### <Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values.

For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQH/LQW series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

### <Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

## Measuring Method

### Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixtures can be described by F-parameter as shown in the following:

2. The impedance of chip inductors (chip coils)  $Z_x$  and measured value  $Z_m$  can be described by input/output current/voltage.

$$Z_m = \frac{V_1}{I_1}, \quad Z_x = \frac{V_2}{I_2}$$

3. Thus, the relation between  $Z_x$  and  $Z_m$  is shown in the following:

$$Z_x = \alpha \frac{Z_m - \beta}{1 - Z_m \Gamma}$$

where,  $\alpha = D / A = 1$

$\beta = B / D = Z_{sm} - (1 - Y_{om} Z_{sm}) Z_{ss}$

$\Gamma = C / A = Y_{om}$

(  $Z_{sm}$ : measured impedance of short chip  
 $Z_{ss}$ : residual impedance of short chip\*  
 $Y_{om}$ : measured admittance when opening the fixture )

\*Residual inductance of short chip

Residual Inductance	Series
0.556nH	LQW04CA/15CA

4.  $L_x$  and  $Q_x$  should be calculated with the following equation.

$$L_x = \frac{\text{Im}(Z_x)}{2\pi f}, \quad Q_x = \frac{\text{Im}(Z_x)}{\text{Re}(Z_x)}$$

$L_x$ : Inductance of chip Inductors (chip coils)  
 $Q_x$ : Q of chip Inductors (chip coils)  
 $f$ : Measuring frequency

# Inductors for General Circuits Soldering and Mounting

## 1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip Inductor's (chip coil's) electrode.

Attention should be paid to potential magnetic coupling effects when using the Inductor (coil) as a resonator.

## 2. Standard Soldering Conditions

### (1) Soldering method

Chip Inductors (Chip coils) can be flow or reflow soldered.

Please contact Murata regarding other soldering methods.

Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).

Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

### (2) Soldering profile

- Flow Soldering profile  
 (Sn-3.0Ag-0.5Cu solder)

Series	Pre-heating		Standard Profile			Limit Profile		
	Temp. (T1)	Time. (t1)	Heating		Cycle of flow	Heating		Cycle of flow
			Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t1)	
LQB18N LQM18N LQM21N LQH31M	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.
LQH32M	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	1 time

- Reflow Soldering profile  
 (Sn-3.0Ag-0.5Cu solder)

Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQB15N LQB18N LQM18N LQM21N LQH31M LQH43N LQH44N LQW04CA LQW15CA	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.
LQH32M LQH43M	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	1 time

### (3) Reworking with a Soldering Iron

\*Except for LQW04CA

Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

Soldering iron power output: 80W max.

Temperature of soldering iron tip: 350°C

Diameter of soldering iron end: 3.0mm max.

Soldering time: within 3 s

Please keep the fix time with the soldering iron within 2 times.

Continued on the following page. ↗

Continued from the preceding page. ↘

### 3. Mounting Instructions

#### (1) Land Pattern Dimensions

Large lands reduce the Q of the mounted chip. Also, large protruding land areas (bordered by lines having the dimensions "c" and "d" shown) cause floating and electrode leaching.

#### (2) Land Pattern Designing (LQH series)

Please follow the recommended patterns. Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in "position shift" in the soldering process.

#### (3) Magnetic Coupling

Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling. LQB/LQM series have a magnetically shielded structure. The structure makes their coupling coefficient smaller than that of conventional chip inductors (chip coils).

#### (4) PCB Warping

The PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

#### (5) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that the correct amount is applied.

Guideline of solder paste thickness

- LQM: 100 to 150 $\mu$ m
- LQB: 100 to 200 $\mu$ m
- LQH: 200 to 300 $\mu$ m
- LQW04CA: 80 to 100 $\mu$ m
- LQW15CA: 50 to 100 $\mu$ m

Continued on the following page. ↗

Continued from the preceding page. ↘

### 4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic  
Output: 20W/l max.  
Duration: 5 minutes max.  
Frequency: 28 to 40kHz  
Care should be taken not to cause resonance of the PCB and mounted products.
- (3) Cleaning agent  
The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.
  - (a) Alcohol cleaning agents  
Isopropyl alcohol (IPA)
  - (b) Aqueous cleaning agents  
Pine Alpha ST-100S

- (4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

## Inductors for General Circuits Packaging

### Minimum Quantity and 8mm Width Taping Dimensions

The dimension of the cavity of embossed tape is measured at the bottom side.

#### Paper Tape

#### ⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "N," and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

#### ⑦ Inductance Tolerance

Code	Inductance Tolerance
B	±0.1nH
C	±0.2nH
D	±0.5nH
F	±1%
G	±2%
H	±3%

Operating temp. range (Self-temp. rise not included): -55 to 125°C

For reflow soldering only

\*S.R.F.: Self-Resonant Frequency

In operating temperatures exceeding +85°C, derating of current is necessary for the LQW15A\_80 series. Please apply the derating curve shown in the chart according to the operating temperature. Please consider the "Notice (Rating)."

Operating temp. range (Self-temp. rise not included): -55 to 125°C

For reflow soldering only

\*S.R.F.: Self-Resonant Frequency

In operating temperatures exceeding +85°C, derating of current is necessary for the LQW18AN\_80 series. Please apply the derating curve shown in the chart according to the operating temperature. Please consider the "Notice (Rating)."

In operating temperatures exceeding +85°C, derating of current is necessary for the LQW18AN\_80 series. Please apply the derating curve shown in the chart according to the operating temperature.

Derating of Rated Current

## RF Inductors

# LQW18AS\_00 Series 0603 (1608) inch (mm)

### Appearance/Dimensions

### Packaging

Code	Packaging	Minimum Quantity
D	ø180mm Paper Taping	4000
J	ø330mm Paper Taping	10000
B	Packing in Bulk	500

### Rated Value (□: packaging code)

Operating temp. range (Self-temp. rise included): -55 to 125°C

For reflow soldering only

\*S.R.F.: Self-Resonant Frequency

In operating temperatures exceeding +85°C, derating of current is necessary for the LQW2BAN\_00 series. Please apply the derating curve shown in the chart according to the operating temperature. When rated current is applied to the products, self-temperature rise shall be limited to 40°C max. Please consider the "Notice (Rating)."

## RF Inductors ⚠️Caution/Notice

### ⚠️Caution

#### Rating

##### 1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

##### 2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise.  
Please contact us in advance if applying a surge current.

### Notice

#### Storage and Operating Condition

##### <Operating Environment>

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

##### <Storage Requirements>

##### 1. Storage Period

The LQG series should be used within 6 months; the other products should be used within 12 months.

Check solderability if this period is exceeded.

##### 2. Storage Conditions

(1) Store products in a warehouse in compliance with the following conditions:

Temperature: -10 to +40 degrees C.

Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in a chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.

This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.

(2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.

(3) Store products on pallets to protect from humidity, dust, etc.

(4) Avoid heat shock, vibration, direct sunlight, etc.

#### Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

##### LQW\_A/LQW\_H series

- To prevent breaking the wire, avoid touching with sharp materials, such as tweezers or the bristles of a cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, a support pin pushes the components up from the bottom of the base tape. In this case, please remove the support pin. The support pin may damage the components and break the wire.
- In rare cases, the laser recognition cannot recognize this component. Please contact us when you use laser recognition. (There is no problem with the permeation and reflection type.)

##### LQH\_H series

- To prevent breaking the wire, avoid touching with sharp materials, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.

##### LQG,LQP series (except LQP02\_02/LQP03\_02)

- The pattern of the chip Inductors is covered with protective film. Take care to avoid damaging the chip Inductors when handling it with pick-up nozzles, sharp instruments, etc.

##### <Transportation>

Do not apply excessive vibration or mechanical shock to products.

Continued on the following page. ↗

## RF Inductors Soldering and Mounting

Continued from the preceding page. ↘

### <Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values.

For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

### (LQW, LQH series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

### (LQP02\_02/LQP03\_02)

When products are coated with resin, please contact us in advance.

### <Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

Bending

Twisting

## Measuring Method

### Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixtures can be described by F-parameter as shown in the following:

2. The impedance of chip Inductors (chip coils)  $Z_x$  and measured value  $Z_m$  can be described by input/output current/voltage.

$$Z_m = \frac{V_1}{I_1}, \quad Z_x = \frac{V_2}{I_2}$$

3. Thus, the relation between  $Z_x$  and  $Z_m$  is shown in the following:

$$Z_x = \alpha \frac{Z_m - \beta}{1 - Z_m \Gamma}$$

$$\text{where, } \alpha = D / A = 1$$

$$\beta = B / D = Z_{sm} - (1 - Y_{om} Z_{sm}) Z_{ss}$$

$$\Gamma = C / A = Y_{om}$$

( $Z_{sm}$ : measured impedance of short chip  
 $Z_{ss}$ : residual impedance of short chip\*  
 $Y_{om}$ : measured admittance when opening the fixture)

### \*Residual inductance of short chip

Residual Inductance	Series
0nH	LQG15H/LQP03TG
0.110nH	LQP02HQ/LQP02TN/LQP02TQ
0.464nH	LQW04AN
0.480nH	LQP03HQ/LQP03TN_02/LQW03AW
0.556nH	LQG15HN, LQW15A, LQP15M
0.771nH	LQG18H, LQP18M, LQW18A, LQW21H/LQW2BAN

4.  $L_x$  and  $Q_x$  should be calculated with the following equation.

$$L_x = \frac{\text{Im}(Z_x)}{2\pi f}, \quad Q_x = \frac{\text{Im}(Z_x)}{\text{Re}(Z_x)}$$

$L_x$ : Inductance of chip Inductors (chip coils)  
 $Q_x$ : Q of chip Inductors (chip coils)  
 $f$ : Measuring frequency

Please contact us for LQW18AS, LQW2BAS, LQW2UAS, because they are different from other inductors regarding the inductance calculation method.

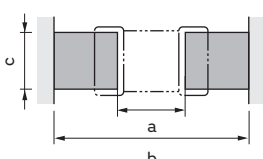

# RF Inductors Soldering and Mounting

## 1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip inductor's (chip coil's) electrode.

Attention should be paid to potential magnetic coupling effects when using the inductor (coil) as a resonator.

## 2. Standard Soldering Conditions

### (1) Soldering method

Chip Inductors (Chip coils) can be flow or reflow soldered.

Please contact Murata regarding other soldering methods.

For LQG, LQP,

LQW03A/04A/15A/18A/21H/2BA/2UA series, please use reflow soldering.

Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).

Do not use water-soluble flux.

The flux used for the LQW03/04/15/18/21/2BA/2UA series should be a rosin-based flux that includes a middle activator equivalent to 0.06wt% to 0.1wt% chlorine.

For additional mounting methods, please contact Murata.

Continued on the following page. ↗

## RF Inductors Soldering and Mounting

Continued from the preceding page. ↘

### (2) Soldering profile

#### ●Flow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Pre-heating		Standard Profile			Limit Profile		
	Temp. (T1)	Time. (t1)	Heating		Cycle of flow	Heating		Cycle of flow
			Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)	
LQW2BH/31H LQH31H	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.

#### ●Reflow Soldering profile (Sn-3.0Ag-0.5Cu solder)

Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQG15H/18H LQW03A/04A/15A/18A/21H LQW2BA/2UA LQP02T/03T/15M/18M LQW2BH/31H LQH31H	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.

### (3) Reworking with a Soldering Iron

\*Except for LQP02T/LQW04AN/03AW/15AN\_80

Series

Preheating at 150°C for 1 minute is required. Do not directly touch the ceramic element with the tip of the soldering iron. The reworking soldering conditions are as follows:

Soldering iron power output: 80W max.

Temperature of soldering iron tip: 350°C

Diameter of soldering iron end: 3.0mm max.

Soldering time: within 3 s

Please keep the fix time with the soldering iron within 2 times.

Continued on the following page. ↗

## RF Inductors Soldering and Mounting

Continued from the preceding page. ↘

### 3. Mounting Instructions

#### (1) Land Pattern Dimensions

Large lands reduce the Q of the mounted chip. Also, large protruding land areas (bordered by lines having the dimensions "c" and "d" shown) cause floating and electrode leaching.

#### (2) Land Pattern Designing (LQW series)

Please follow the recommended patterns. Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in "position shift" in the soldering process.

#### (3) PCB Warping

The PCB should be designed so that products are not subjected to mechanical stress caused by warping the board.

Continued on the following page. ↗

## RF Inductors Soldering and Mounting

Continued from the preceding page. ↘

### (4) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that the correct amount is applied.

Guideline of solder paste thickness

- LQP (\*Except for LQP02TN/LQP02TQ/HQ/LQP03TQ/HQ),LQG,LQW15AN\_00/LQW15AN\_10/LQW18AN/LQW21H/LQW2BA/LQW2UA: 100 to 150μm
- LQP02TN: 50 to 80μm
- LQP02TQ/HQ: 50 to 65μm
- LQP03TQ/HQ: 100μm
- LQW03A/LQW04A: 80 to 100μm
- LQW15AN\_80: 50 to 100μm
- LQW\_H: 200 to 300μm

### LQW15A Series:

Too much solder may cause slant or rotation of the chip at the time of solder melting. Please reduce the amount of solder by using a smaller solder area than the land pattern, as shown in the figure at right.

## 4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
  - Output: 20W/l max.
  - Duration: 5 minutes max.
  - Frequency: 28 to 40kHz
  - Care should be taken not to cause resonance of the PCB and mounted products.

### (3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

- (a) Alcohol cleaning agents
  - Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agents
  - Pine Alpha ST-100S

- (4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

## RF Inductors Packaging

### Minimum Quantity and 8mm Width Taping Dimensions

#### Paper Tape

Part Number	Dimensions		Total Thickness of Tape c	Packaging Code (Minimum Qty. (pcs.))		
	a	b		ø180mm reel	ø330mm reel	Bulk

## TOKO Products Inductors for Power Lines

# DFE201208S Series 0805 (2012) inch (mm)

### Appearance/Dimensions

(in mm)

### Packaging

Code	Packaging	Minimum Quantity
=P2	ø180mm Embossed Taping	3000

### Rated Value (□: packaging code)

Part Number	Inductance	Rated Current (Isat)*	Rated Current (Itemp)*	Max. of DC Resistance	Inductance Test Frequency
DFE201208S-R47M□	0.47μH ±20%	4000mA	3000mA	0.042Ω	1MHz
DFE201208S-1R0M□	1.0μH ±20%	2700mA	2100mA	0.084Ω	1MHz
DFE201208S-1R5M□	1.5μH ±20%	2300mA	1800mA	0.120Ω	1MHz
DFE201208S-2R2M□	2.2μH ±20%	1800mA	1400mA	0.204Ω	1MHz

Operating temp. range (Self-temp. rise included): -40 to 125°C

Absolute maximum voltage: 20V DC

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Resistance Hitester 3541 (HIOKI) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C.)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)

Class of Magnetic Shield: Metal Alloy

1277AS-H-100M□	10μH ±20%	1200mA	900mA	0.420Ω	1MHz

Operating temp. range (Self-temp. rise included): -40 to 85°C

Absolute maximum voltage: 20V DC

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Resistance Hitester 3541 (HIOKI) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C.)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)

### Inductance-Frequency Characteristics (Typ.)

## TOKO Products Inductors for Power Lines

# DFE252007F Series 1008 (2520) inch (mm)

### Appearance/Dimensions

(in mm)

### Packaging

Code	Packaging	Minimum Quantity
=P2	ø180mm Embossed Taping	3000

### Rated Value (□: packaging code)

Part Number	Inductance	Rated Current (Isat)*	Rated Current (Itemp)*	Max. of DC Resistance	Inductance Test Frequency
DFE252007F-R47M□	0.47μH ±20%	3300mA	2700mA	0.053Ω	1MHz
DFE252007F-1R0M□	1.0μH ±20%	2800mA	2100mA	0.085Ω	1MHz
DFE252007F-1R5M□	1.5μH ±20%	2100mA	1700mA	0.132Ω	1MHz
DFE252007F-2R2M□	2.2μH ±20%	1800mA	1400mA	0.182Ω	1MHz
DFE252007F-3R3M□	3.3μH ±20%	1500mA	1200mA	0.275Ω	1MHz
DFE252007F-4R7M□	4.7μH ±20%	1200mA	940mA	0.450Ω	1MHz

Operating temp. range (Self-temp. rise included): -40 to 125°C

Absolute maximum voltage: 20V DC

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Resistance Hitester 3541 (HIOKI) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C.)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)

Class of Magnetic Shield: Metal Alloy

Operating temp. range (Self-temp. rise included): -20 to 100°C

Absolute maximum voltage: 30V DC

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with 34420A (Keysight) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C)

Class of Magnetic Shield: Metal Alloy

Operating temp. range (Self-temp. rise included): -20 to 100°C

Absolute maximum voltage: 30V DC

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with 34420A (Keysight) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 20%. (The ambient reference temperature is 20°C)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C)

Class of Magnetic Shield: Metal Alloy

## TOKO Products Inductors for Power Lines

# DEM3518C Series 1514 (3735) inch (mm)

### Appearance/Dimensions

### Packaging

Code	Packaging	Minimum Quantity
=P3	ø330mm Embossed Taping	2000

### Rated Value (□: packaging code)

Part Number	Inductance	Rated Current (Isat)*	Rated Current (Itemp)*	DC Resistance	Inductance Test Frequency
1231AS-H-R56N□	0.56μH ±30%	3300mA	3400mA	0.024Ω+20%/-30%	0.1MHz
1231AS-H-1R2N□	1.2μH ±30%	2400mA	2900mA	0.030Ω+20%/-30%	0.1MHz
1231AS-H-1R5N□	1.5μH ±30%	2100mA	2700mA	0.035Ω+20%/-30%	0.1MHz
1231AS-H-2R2M□	2.2μH ±20%	1900mA	2550mA	0.040Ω+20%/-30%	0.1MHz
1231AS-H-3R3M□	3.3μH ±20%	1600mA	2250mA	0.050Ω+20%/-30%	0.1MHz
1231AS-H-4R7M□	4.7μH ±20%	1350mA	2000mA	0.060Ω+20%/-30%	0.1MHz
1231AS-H-6R4M□	6.4μH ±20%	1150mA	1650mA	0.085Ω+20%/-30%	0.1MHz
1231AS-H-100M□	10μH ±20%	900mA	1250mA	0.145Ω+20%/-30%	0.1MHz
1231AS-H-120M□	12μH ±20%	850mA	1200mA	0.155Ω+20%/-30%	0.1MHz
1231AS-H-150M□	15μH ±20%	800mA	1100mA	0.185Ω+20%/-30%	0.1MHz
1231AS-H-220M□	22μH ±20%	650mA	880mA	0.285Ω+20%/-30%	0.1MHz

Operating temp. range (Self-temp. rise included): -40 to 85°C

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Digital Multimeter TR6871 (Advantest) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C.)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)

Class of Magnetic Shield: Ferrite Core

Measured with a Digital Multimeter TR6871 (Advantest) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C.)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)

Class of Magnetic Shield: Magnetic Resin

Operating temp. range (Self-temp. rise included): -40 to 85°C

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Digital Multimeter TR6871 (Advantest) or equivalent.

For reflow soldering only

\*Isat: Rated Current based on Inductance change

\*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 10%. (The ambient reference temperature is 20°C.)

Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)

Class of Magnetic Shield: Ferrite Core

### Temperature Rise Characteristics (Typ.)

## Inductors for Power Lines Precautions

### 1. Precaution for Application

- 1.1 The part must be pre-heated before soldering if reflow is applied.  
The difference between pre-heat temperature and soldering temperature must be within 150°C.
- 1.2 If a soldering iron is applied, the soldering process must be completed within 4 seconds at a soldering temperature lower than 350°C.  
The tip of the soldering iron must not touch the terminal electrode in this process.
- 1.3 Terminals should not be handled with fingers. This is to prevent deterioration in solderability.
- 1.4 Soldering using a soldering iron must be done only once for each part.
- 1.5 PPCB mount: this part must be handled with care to minimize any physical stress to the part at the board assembly process.
- 1.6 To minimize the influence to the part, the thickness of PCB, land dimension, and the amount of solder must be evaluated carefully by individual application.
- 1.7 If a washing process is applied, please make sure there is no problem with operating.
- 1.8 Products should not be dropped on the floor. This is to prevent damage to the products.
- 1.9 Although electrical performance is satisfactory, audible noises may be made if audio frequency ingredient is contained in current.  
Before using, please make sure there aren't any problem with operating.

### 2. Precaution for Storage

Storage condition is critical to maintain an optimum soldering performance.

- 2.1 Environmental requirements:  
Control ambient temperature at or under 40°C and 70%RH.  
Recommended use of the products within 6 months.
- 2.2 Influence of harmful gas:  
Store the products in a place isolated from harmful gases like sulfur and chlorine.

### 2. Standard Soldering Profile

#### ●Reflow Soldering Profile 1

\*Reflow Times: 2 times max.

\*We recommend an infrared ray as the heat source of the reflow bath. However halogen lamp should not be used; the side heat would be beyond the range of resistance heat, so we do not recommend it.

## Inductors for Power Lines Reel Packaging

### Taping for Automatic Insertion of SMT Coils

#### Surface Mount Devices/Adjustable & Fixed

This ever-expanding assortment of products and unsurpassed quality control not only give you a component that functionally performs, but just as importantly, allows the use of a variety of placement and soldering equipment necessary for the FLEXIBLE MANUFACTURING PLANT required in today's competitive world.

Various packaging schemes are available. In addition to bulk, tape and reel, and magazine, methods are offered for high volume insertion equipment. The following chart lists the packaging details for SMD coils:

#### ⚠Notes

- (1) There are at least 10 blank spaces (80mm each) at both ends of the tape that do not include the coils.
- (2) The protective tape should not cover the holes nor be shifted to the sides. Further, the tape should not be removed during transportation.
- (3) The coils are positioned with the bonding surface facing the bottom of the pocket.
- (4) Dimensional tolerances conform to Japan Industrial Standard JIS C 0806-3, Packaging of components for automatic handling— Part3: Packaging of surface mount components on continuous tapes.

## TOKO Products Inductors for General Circuits

# LLB2520 Series 1008 (2520) inch (mm)

### Appearance/Dimensions

### Packaging

Code	Packaging	Minimum Quantity
=P2	ø180mm Embossed Taping	2000

### Rated Value (□: packaging code)

Part Number	Inductance	Rated Current	S.R.F.* (min.)	Inductance Test Frequency	Max. of DC Resistance
#FSLB2520-1R0M□	1.0μH ±20%	480mA	130MHz	1MHz	0.30Ω
#FSLB2520-1R5M□	1.5μH ±20%	435mA	95MHz	1MHz	0.38Ω
#FSLB2520-2R2M□	2.2μH ±20%	390mA	75MHz	1MHz	0.44Ω
#FSLB2520-3R3M□	3.3μH ±20%	340mA	60MHz	1MHz	0.57Ω
#FSLB2520-4R7M□	4.7μH ±20%	310mA	50MHz	1MHz	0.68Ω
#FSLB2520-6R8M□	6.8μH ±20%	295mA	40MHz	1MHz	0.89Ω
#FSLB2520-100K□	10μH ±10%	220mA	33MHz	1MHz	1.10Ω
#FSLB2520-150K□	15μH ±10%	180mA	28MHz	1MHz	1.70Ω
#FSLB2520-220K□	22μH ±10%	160mA	23MHz	1MHz	2.50Ω
#FSLB2520-330K□	33μH ±10%	130mA	18MHz	1MHz	3.80Ω
#FSLB2520-470K□	47μH ±10%	100mA	15MHz	1MHz	5.40Ω

Operating temp. range (Self-temp. rise included): -40 to 85°C

Inductance:

Measured with an LCR meter 4291A (Keysight).

RDC:

Measured with a Digital Multimeter TR6871 (Advantest).

For reflow soldering only

Previous Series Name: FSLB2520

\*S.R.F.: Self-Resonant Frequency

Rated current is specified when the decrease of the initial inductance value at 10%. (The ambient reference temperature is 20°C.)

OR rated current is specified when temperature of inductor the is raised 20°C by DC current. (The ambient reference temperature is 20°C.)

Whichever is smaller.

Class of Magnetic Shield: No Shield

LLM3225-3R9J	3.9μH ±5%	250mA	30	60MHz	7.96MHz	1.00Ω	7.96MHz
LLM3225-4R7J	4.7μH ±5%	240mA	30	55MHz	7.96MHz	1.20Ω	7.96MHz
LLM3225-5R6J	5.6μH ±5%	230mA	30	50MHz	7.96MHz	1.40Ω	7.96MHz
LLM3225-6R8J	6.8μH ±5%	220mA	30	45MHz	7.96MHz	1.60Ω	7.96MHz
LLM3225-8R2J	8.2μH ±5%	210mA	30	40MHz	7.96MHz	1.80Ω	7.96MHz
LLM3225-100J	10μH ±5%	220mA	30	27MHz	2.52MHz	1.70Ω	2.52MHz
LLM3225-120J	12μH ±5%	200mA	30	23MHz	2.52MHz	1.90Ω	2.52MHz

Operating temp. range (Self-temp. rise included): -40 to 85°C

Inductance:

Measured with an LCR meter 4194A or 4291A (Keysight).

RDC:

Measured with a Digital Multimeter TR6871 (Advantest).

For reflow soldering only

\*S.R.F.: Self-Resonant Frequency

Rated current is specified when the decrease of the initial inductance value at 10%. (The ambient reference temperature is 20°C.)

OR rated current is specified when temperature of inductor the is raised 20°C by DC current. (The ambient reference temperature is 20°C.)

Whichever is smaller.

Class of Magnetic Shield: No Shield

### Q-Frequency Characteristics (Typ.)

## Inductors for General Use Precautions

### 1. Precaution for Application

- 1.1 The part must be pre-heated before soldering if reflow is applied.  
The difference between pre-heat temperature and soldering temperature must be within 150°C.
- 1.2 If a soldering iron is applied, the soldering process must be completed within 4 seconds at a soldering temperature lower than 350°C.  
The tip of the soldering iron must not touch the terminal electrode in this process.
- 1.3 Terminals should not be handled with fingers. This is to prevent deterioration in solderability.
- 1.4 Soldering using a soldering iron must be done only once for each part.
- 1.5 PCB mount: this part must be handled with care to minimize any physical stress to the part at the board assembly process.
- 1.6 To minimize the influence to the part, the thickness of PCB, land dimension, and the amount of solder must be evaluated carefully by individual application.
- 1.7 If a washing process is applied, please make sure there is no problem with operating.
- 1.8 Products should not be dropped on the floor. This is to prevent damage to the products.
- 1.9 Although electrical performance is satisfactory, audible noises may be made if audio frequency ingredient is contained in current.  
Before using, please make sure there aren't any problem with operating.

### 2. Precaution for Storage

Storage condition is critical to maintain an optimum soldering performance.

- 2.1 Environmental requirements:  
Control ambient temperature at or under 40°C and 70%RH.  
Recommended use of the products within 6 months.
- 2.2 Influence of harmful gas:  
Store the products in a place isolated from harmful gases like sulfur and chlorine.

### 2. Standard Soldering Profile

#### ●Reflow Soldering Profile 2

\*Preheat: Temperature 150 to 180°C, Time 60 to 120 sec.  
 \*Peak: Temperature 260°C (230°C over, 30 to 40 sec.)  
 \*Reflow Possibility Times: 2 times

Series	Heating		Peak Temperature	Cycle of Flow
	Temp.	Time		
LLB2520 LLM2520 LLM3225	230°C	30 to 40s	260°C max.	2 times max.

## Inductors for General Use Reel Packaging

### Taping for Automatic Insertion of SMT Coils

#### Surface Mount Devices/Adjustable & Fixed

This ever-expanding assortment of products and unsurpassed quality control not only give you a component that functionally performs, but just as importantly, allows the use of a variety of placement and soldering equipment necessary for the FLEXIBLE MANUFACTURING PLANT required in today's competitive world.

Various packaging schemes are available. In addition to bulk, tape and reel, and magazine, methods are offered for high volume insertion equipment. The following chart lists the packaging details for SMD coils:

#### ⚠Notes

- (1) There are at least 10 blank spaces (80mm each) at both ends of the tape that do not include the coils.
- (2) The protective tape should not cover the holes nor be shifted to the sides. Further, the tape should not be removed during transportation.
- (3) The coils are positioned with the bonding surface facing the bottom of the pocket.
- (4) Dimensional tolerances conform to Japan Industrial Standard JIS C 0806-3, Packaging of components for automatic handling— Part3: Packaging of surface mount components on continuous tapes.

#### Tape and Reel Dimensions

#### Surface Mounting Type, Reel/Tape List

Series	Reel Size (mm)			Tape Size (mm)							Q'ty 1 Reel

## ⚠ Note

### 1 Export Control

*For customers outside Japan:*

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

*For customers in Japan:*

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2 Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- ① Aircraft equipment
- ② Aerospace equipment
- ③ Undersea equipment
- ④ Power plant equipment
- ⑤ Medical equipment
- ⑥ Transportation equipment (vehicles, trains, ships, etc.)
- ⑦ Traffic signal equipment
- ⑧ Disaster prevention / crime prevention equipment
- ⑨ Data-processing equipment
- ⑩ Application of similar complexity and/or reliability requirements to the applications listed above

3 Product specifications in this catalog are as of November 2016. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4 Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5 This catalog has only typical specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6 Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7 No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
